Albert Winsemius And Singapore: Here It Is Going To Happen Euston Quah, Luke Nursultan Iuldashov, Zach Lee, 2022-05-18 Here it is going to happen is the title of a painting memorialising Albert Winsemius' industrial survey mission to Singapore. The picture depicts the hilltop view of a pre-industrial Jurong. Besides being a biography of Albert Winsemius, the book examines Albert Winsemius' affinity with Singapore and his contributions to the nation's economic development. It also looks at his legacy and influence on past, current and future economic planners.

Biohackers Magazine Issue 17, When one experiences a new product, a new treatment, or a new idea, there's little that compares to the feelings of excitement and hope that rush in, fueling one's faith in the upright direction of humanity. I just recently attended the 8th Annual Biohacking Conference hosted by Dave Asprey in LA and like each biohacking event, I left feeling inspired to say the least. Everything I saw, every person I met, and every biohack I experienced, further fed my appetite to share these great ideas and practices with the world, a world hungering for the opposite approach of industrialized medicine. Now, of course, not every biohack is exactly 100% proven. Suffice it to say, there are many that are still in the process of collecting data from studies and clinical trials. However, those that have stood up to the modern pill-popping regimes and have adamantly supported their ideas on the foundations of strong scientific data, are truly examples to be held in high regard. I was impressed with the many products and companies at the conference that held a mission of dedicated service to fellow mankind. Yes, like in any startup industry, or even industry for that matter, there are those who are looking to push some falsehood to scheme people into buying their product or services. But as we know, the companies that rise to the top are those that stick to the cardinal virtues that make up all of us, Prudence, Justice, Fortitude, and Temperance. The Biohacking Industry is outgrowing its mold and soon a new layer of enthusiasts will be added. This is something that should enthrall us, but it shouldn't permit us to lose sight of the foundational attributes that make and will continue to make us biohackers for the rest of our lives. Essentially, we are all after freedom - freedom from disease, freedom from injury, freedom from hysteria, and freedom from aging. Responsible Biohacking is perhaps the best way towards that freedom, and we must continually adjust our sails to catch the winds that stem from truth and service. That is what we at Biohackers Magazine strive towards - serving the community through the provision of information carefully discerned and

attuned to the values of sincerity and science.

Cultivating Organizational Excellence Albert Ferdinand Aalders,2023-04-11 This book offers a comprehensive approach to organizational excellence based on the author's vast experience in managing excellence at highly innovative and dynamic organizations. It integrates various approaches into a consistent view of achieving excellence in the context of dynamic technological and societal developments. Starting from purpose and mission, it describes stakeholder mapping and analysis, and process and quality management. In turn, it sheds light on how to deal with business dynamics of various types and demonstrates how quantum-mechanical models can help to understand and manage dynamic organizational processes. The book then introduces readers to result measuring and performance management, followed by organizational learning and rewards and recognition. Moreover, it discusses (innovation) ecosystem leverage and organizational culture management as further important capabilities of excellent organizations. Best practices in corporate social responsibility and environmental, social and governance aspects are fully integrated throughout the book, which concludes by explaining how the UN Sustainable Development Goals can be applied to optimize business initiatives. The book is intended as a source of inspiration for managers working under highly dynamic organizational conditions, helping them take their businesses to higher levels. It also provides valuable industrial insights for scholars with an interest in organizational excellence.

Design and Use of Assistive Technology Meeko Mitsuko K. Oishi,Ian M. Mitchell,H. F. Machiel Van der Loos,2010-09-16 Design and Use of Assistive Technology assesses major hurdles in the design and use of assistive technologies, while also providing guidelines and recommendations to improve these technologies. This volume takes an interdisciplinary approach to solving the major issues surrounding designing and using assistive technologies for the physically impaired by blending engineering, computer science and medicine. The most difficult problems in assistive technologies, such as privacy concerns in data gathering and analysis, inherent heterogeneity of the user population, knowledge transfer of novel technologies and incorporation of the user perspective into the design process are all addressed. The book also: -Presents theories on assistive technology through the lens of fields ranging from engineering and computer science to occupational therapy and neurology -Discusses assistive technologies in a broad scope that presents designs and theories that are universally applicable Design and Use of Assistive Technology features contributions from experts in their subject areas who discuss specific methods and mechanisms to integrate the user's experience into design and clinical evaluation in order to both create academic outreach through practical service models and improve knowledge transfer.

The CD-ROM Drive Sorin G. Stan,2013-06-29 The Compact Disc (CD), as a standardized information carrier, has become one of the most successful consumer products ever marketed. Although the original disc was intended for audio playback, its specific advantages opened very quickly the way towards various computer applications. The standardization of the Compact

Disc Read-Only Memory (CD-ROM) and of all succeeding similar products, like Compact Disc interactive (CD-i), Photo and Video CD, CD Recordable (CD-R), and CD Rewritable (CD R/W), has substantially enlarged the range of possible applications. The plastic disc represented from the very beginning a removable medium of large storage capacity. The advent of the personal computer accompanied by the increasing demand for both data distribution and exchange have strongly marked the evolution of the CD-ROM drive. The number of sold CD-ROM units exceeded 60 millions in 1997 when compared to about 2.5 millions in 1992. As computing power continuously improved over the years, computer peripherals have also targeted better performance specifications. In particular, the speed of CD-ROM drives increased from the so-called 1X in 1984 to double speed in 1992, and further to 32X at the beginning of 1998. The average time needed to access data on disc has dropped from about 300 ms to less than 90 ms within the same period of time.

Introduction to Permanent Plug and Abandonment of Wells Mahmoud Khalifeh, Arild Saasen, 2020-01-27 This open access book offers a timely guide to challenges and current practices to permanently plug and abandon hydrocarbon wells. With a focus on offshore North Sea, it analyzes the process of plug and abandonment of hydrocarbon wells through the establishment of permanent well barriers. It provides the reader with extensive knowledge on the type of barriers, their functioning and verification. It then discusses plug and abandonment methodologies, analyzing different types of permanent plugging materials. Last, it describes some tests for verifying the integrity and functionality of installed permanent barriers. The book offers a comprehensive reference guide to well plugging and abandonment (P&A) and well integrity testing. The book also presents new technologies that have been proposed to be used in plugging and abandoning of wells, which might be game-changing technologies, but they are still in laboratory or testing level. Given its scope, it addresses students and researchers in both academia and industry. It also provides information for engineers who work in petroleum industry and should be familiarized with P&A of hydrocarbon wells to reduce the time of P&A by considering it during well planning and construction.

The New Sultan Soner Çağaptay, 2017 In a world of rising tensions between Russia and the United States, the Middle East and Europe, Sunnis and Shiites, Islamism and liberalism, Turkey is at the epicentre. And at the heart of Turkey is its right-wing populist president, Recep Tayyip Erdoğan. Since 2002, Erdoğan has consolidated his hold on domestic politics while using military and diplomatic means to solidify Turkey as a regional power. His crackdown has been brutal and consistent - scores of journalists arrested, academics officially banned from leaving the country, university deans fired and many of the highest-ranking military officers arrested. In some senses, the nefarious and failed 2016 coup has given Erdoğan the licence to make good on his repeated promise to bring order and stability under a 'strongman'. Here, leading Turkish expert Soner Çağaptay will look at Erdoğan's roots in Turkish history, what he believes in and how he has cemented his rule, as well as what this means for the world. The book will also unpick the 'threats' Erdogan has worked to combat - from the

liberal Turks to the Gulen movement, from coup plotters to Kurdish nationalists - all of which have culminated in the crisis of modern Turkey.--Bloomsbury Publishing.

Focus Marc Hijink,2024-04-11 Without ASML, the world would be a different place. Marc Hijink takes us behind the scenes and sheds a new light on the ongoing geopolitical diplomatic struggle over this unique company. Without ASML, the world would be a different place. Based in the quiet Dutch town of Veldhoven, this offshoot of Philips Electronics designs the gigantic and extremely complex machines that produce increasingly advanced computer chips. It's Europe's most valuable tech company: ninety percent of the world's chips are manufactured using ASML machines, powering our phones, cars, and the AI revolution. For years, ASML operated in the background, but a geopolitical earthquake has put it in the middle of a tech war. The United States, China and Europe all want to have the most powerful chips at their disposal. And for that, every superpower has their eyes on ASML. Focus. The ASML Way is a breathtaking trip into the world of technology, industrial innovation, and the battle for economic and military power. While ASML's masterminds are aiming for atoms, Marc Hijink roams the cleanrooms and the boardrooms all over the world. He takes us behind the scenes in the White House, The Hague, Taiwan and China, watching the building blocks of these machines grow beyond science fiction, digging into the DNA of hightech design, and analyzing the mindset of ASML's workforce and its laser focused leadership. And, finally, he sheds a new light on the ongoing geopolitical diplomatic struggle over this unique company. 'A delicious, flowing story.' - de Volkskrant

Carbon-Neutral Architectural Design Pablo M. La Roche,2017-07-14 The energy used to operate buildings is one of the most significant sources of greenhouse gas emissions. While it is possible to reduce emissions through climate-responsive design, many architects are not trained to do this. Filling an urgent need for a design reference in this emerging field, this book describes how to reduce building-related greenhouse gas emissions through appropriate design techniques. It presents strategies to achieve CO2 reductions, with an emphasis on control of energy flows through the building envelope and passive heating and cooling strategies. This new, revised edition is updated throughout, and includes a new chapter on building simulations.

Web Engineering Woojong Suh,2005-01-01 Although based primarily on MIS and computer science areas, Web engineering covers a wide range of disciplines, thus making it difficult to gain an understanding of the field. Web Engineering: Principles and Techniques provides clarity to this often muddled issue.

Partitioned convolution algorithms for real-time auralization Frank Wefers,2015-05-11 This work discusses methods for efficient audio processing with finite impulse response (FIR) filters. Such filters are widely used for high-quality acoustic signal processing, e.g. for headphone or loudspeaker equalization, in binaural synthesis, in spatial sound reproduction

techniques and for the auralization of reverberant environments. This work focuses on real-time applications, where the audio processing is subject to minimal delays (latencies). Different fast convolution concepts (transform-based, interpolation-based and number-theoretic), which are used to implement FIR filters efficiently, are examined regarding their applicability in real-time. These fast, elementary techniques can be further improved by the concept of partitioned convolution. This work introduces a classification and a general framework for partitioned convolution algorithms and analyzes the algorithmic classes which are relevant for real-time filtering: Elementary concepts which do not partition the filter impulse response (e.g. regular Overlap-Add and Overlap-Save convolution) and advanced techniques, which partition filters uniformly and non-uniformly. The algorithms are thereby regarded in their analytic complexity, their performance on target hardware, the optimal choice of parameters, assemblies of multiple filters, multi-channel processing and the exchange of filter impulse responses without audible artifacts. Suitable convolution techniques are identified for different types of audio applications, ranging from resource-aware auralizations on mobile devices to extensive room acoustics audio rendering using dedicated multi-processor systems.

Design and Implementation of Health Information Systems World Health Organization Staff, World Health Organization, 2000 This book provides a practical guide to the design and implementation of health information systems in developing countries. Noting that most existing systems fail to deliver timely, reliable, and relevant information, the book responds to the urgent need to restructure systems and make them work as both a resource for routine decisions and a powerful tool for improving health services. With this need in mind, the authors draw on their extensive personal experiences to map out strategies, pinpoint common pitfalls, and guide readers through a host of conceptual and technical options. Information needs at all levels - from patient care to management of the national health system - are considered in this comprehensive guide. Recommended lines of action are specific to conditions seen in government-managed health systems in the developing world. In view of common constraints on time and resources, the book concentrates on strategies that do not require large resources, highly trained staff, or complex equipment. Throughout the book, case studies and numerous practical examples are used to explore problems and illustrate solutions. Details range from a list of weaknesses that plague most existing systems, through advice on when to introduce computers and how to choose appropriate software and hardware, to the hotly debated question of whether patient records should be kept by the patient or filed at the health unit. The book has fourteen chapters presented in four parts. Chapters in the first part, on information for decision-making, explain the potential role of health information as a managerial tool, consider the reasons why this potential is rarely realized, and propose general approaches for reform which have proved successful in several developing countries. Presentation of a six-step procedure for restructuring information systems, closely linked to an organizational model of health services, is followed by a practical discussion of the decision-making process. Reasons for the failure of most health

information to influence decisions are also critically assessed. Against this background, the second and most extensive part provides a step-by-step guide to the restructuring of information systems aimed at improving the quality and relevance of data and ensuring their better use in planning and management. Steps covered include the identification of information needs and indicators, assessment of the existing system, and the collection of both routine and non-routine data using recommended procedures and instruments. Chapters also offer advice on procedures for data transmission and processing, and discuss the requirements of systems designed to collect population-based community information. Resource needs and technical tools are addressed in part three. A comprehensive overview of the resource base - from staff and training to the purchase and maintenance of equipment - is followed by chapters offering advice on the introduction of computerized systems in developing countries, and explaining the many applications of geographic information systems. Practical advice on how to restructure a health information system is provided in the final part, which considers how different interest groups can influence the design and implementation of a new system, and proposes various design options for overcoming specific problems. Experiences from several developing countries are used to illustrate strategies and designs in terms of those almost certain to fail and those that have the greatest chances of success

ECSCW 2001 Wolfgang Prinz, Matthias Jarke, Yvonne Rogers, K. Schmidt, Volker Wulf, 2001-08-31 The emergence and widespread use of personal computers and network technologies has seen the development of interest in the use of computers to support cooperative work. This volume presents the proceedings of the seventh European conference on Computer Supported Cooperative Work (CSCW). This is a multidisciplinary area which embraces both the development of new technologies and an understanding of the grounding of CSCW technology in organizational practices. These proceedings contain a collection of papers that encompass activities in the field, including distributed virtual environments, new models and architectures for groupware systems, studies of communication and coordination among mobile actors, studies of cooperative work in heterogeneous settings, studies of groupware systems in use in real-world settings, and theories and techniques to support the development of cooperative applications. The papers present emerging technologies alongside new methods and approaches to the development of this important class of applications. The work in this volume represents the best of the current research and practice within CSCW. The collection of papers presented here will appeal to both researchers and practitioners alike as they combine an understanding of the nature of work with the possibility offered by new technologies.

Additives for Coatings Johan Bieleman,2008-09-26 No doubt: A perfect coating has to look brilliant! But other properties of coatings are also most important. Coatings have to be durable, tough and easily applicable. Additives are the key to success in achieving these characteristics, even though the amounts used in coating formulations are small. It is not trivial at all to select the best additives. In practice, many series of tests are often necessary, and the results do not explain, why a certain additive improves the quality of a coating and another one impairs the coating. This book is dedicated to developers and applicants of coatings working in research or production, and it is aimed at providing a manual for their daily work. It will answer the following questions: How do the most important groups of additives act? Which effects can be achieved by their addition? Scientific theories are linked to practical applications. Emphasis is put on the optical aspects that are most important for the applications in practice. This book is a milestone in quality assurance in the complete field of coatings!
